MEMORANDUM

SUBJECT: Draft Preliminary Assessment for SKF Industries, Inc. -  
St. Louis, Missouri (EPA ID# MOT300010345)

FROM: Jeff Johnson  
RCRA/GEOL

THRU: Bill Pedicino, Chief  
RCRA/GEOL

TO: Diane Huffman  
RCRA/RCOM

The Preliminary Assessment Report for SKF Industries, Inc., St. Louis, Missouri has been reviewed as requested and the following comments are offered.

Comments:

1. Page 26, 5th paragraph: The meaning of this sentence is unclear. It appears to indicate that the top of the St. Louis occurs at a depth of 800 to 900 feet below the site. However, this value contradicts information provided elsewhere in the report. Site vicinity well logs indicate that the St. Louis in the area ranges from being erosionally absent (well ref. # 7923) to being present at a maximum depth of 135 feet (well ref. # 2460). This information suggests that the value included in the text of the report on the depth of the St. Louis is inaccurate and should be revised based on the available site specific information.
2. Page 32: The photograph of this SWMU is #30 rather than #3 as indicated.

Areas of the report other than those specifically commented on above generally seem adequate and the recommendations provided for each SWMU and AOC seem appropriate and justifiable based on the information presented on these units.

If there are any questions regarding these comments, please contact me at x7849.
